

PRODUCT CARE CHECKLIST

WHEN PRODUCT ARRIVES

- Visually inspect each pallet, when it comes off the truck, for damage to bags, bugs, damaged to product. Note Star Milling 30 day return policy.
- Get product out of the sun as soon as possible—heat from the sun can cause condensation in the bag.
- While putting feed away, note the manufacture date, make sure newer feed is put at the bottom of the stock so the older feed is sold first.

PREPARING THE STORAGE AREA

- The storage area should be cool and have ventilation.
- Make sure that your storage area is not too hot, especially in the warmer months. The heat will cause condensation, which leads to mold.
- Keep feed where there is no direct sunlight on the feed.
- Store feed where rain cannot blow in on the bags.
- It is better to keep feed bags on a pallet instead of the floor.

STORAGE AREA MAINTENANCE

- Monthly spraying for insects will prevent current and future problems.
 - Monthly baiting or trapping of rodents will prevent damage to bags.
 - Daily sweeping of feed that has spilled on the floor will reduce rodents.
 - Not having available water in the area will reduce rodents.
 - Keep feed on pallets, to make it harder for rodents to hide.
